The Mandela Effect: Confabulation Or Fact?

Synopsis

World maps have changed, bible passages are not as we memorized them, movie lines are different, logos have morphed into things that we don't recognize. It's been called "The Mandela Effect", so named because when Nelson Mandela died in 2013, a large number of people claimed that they remembered that Mandela had died in the 1980s. The Mandela Effect is a phenomenon that has hit us on a global level. Is it confabulation or fact? Here is a comprehensive explanation of all the anomalies that have been occurring in our society, making us question the validity of our memories, and the possibility that we might be insane, or maybe we have entered a different universe. This is not science fiction. It is very real, and has been affecting millions of people throughout the world.

I was very honored to be able to narrate this in a video. She did a wonderful job with the extensive research she did, as well as the photos and links. This is to allow the reader to verify these things for yourself. She also provides a "test" you can use to question others in hopes to get the word out about this "effect".

She consistently misstates the first name of the physicist Schrödinger " every time, she calls him "Edwin," but his first name was Erwin. As Schrödinger is central to her claims, she should at least get his name right.

This book is a good introduction to a fascinating topic. Whether it is parallel dimensions, or some sort of brain disorder spreading the implications are yet to be realized. Just remember always, that if you find something wrong and it has always been that way, then don't think your crazy, but don't make people who have no idea what your talking about think your crazy either.
